1D Ring | Figure 8 — METHOD ADAPTED: fixed-input LDS diagnosis; no session statistics
A
24 R3 snapshots; identical fixed field
R3 peak rate (dimensionless)
Largest peak excursion: 1.23e-05
Extension time (ms)
B
24 × 24 endpoint distances
Recorded condition index
Recorded condition index
Full-state Euclidean distance
C
Pairwise CD: fixed D=+1, S=1
Unnormalized CD coordinate
trial 0: L=0
trial 12: L=3
Extension time (ms)
D
Descriptive deterministic phase trace
CD change / 10 ms
Pairwise CD coordinate
E
Full-state field residual at endpoints
||f(r)||₂ (rate / ms)
Recorded condition index
F
Representative spectrum (kink slope = 0.5)
24 stable endpoint clusters
24/24 identities retained
Euler ρ = 0.958333
Im λ (1/ms)
Re λ (1/ms)
