
2D Topology | Figure 9: six perturbation targets; full-state recovery, no rest-as-recovery
A
Projected perturbation (L=0, R3)
Control
Full RMS .3, seed 7
Full-state final L2 = 1.5
Projection alone does not define recovery
Endpoint PC1
Endpoint PC2
B
RMS .1: normalized full-state distance
full
response
active_branch
unselected_branch
E
I
d(t) / d(0)
Time (ms)
C
Full RMS .3: cross-temporal distance
Perturbed time (ms)
Control time (ms)
Full-state L2
D
Finite-basin recovery with identity retained
Recovery fraction
Target RMS before clipping
E
Position / branch identity switches
Switch fraction
Target RMS before clipping
F
Clipped local slice; projected flow
Endpoint PC1 offset
Endpoint PC2 offset
Off-plane ||f|| / ms
